Description:

DIP-CIBs are low profile, thermally efficient, transfer mold modules. Each module consists of a three-phase diode converter section, a three-phase inverter section and a brake circuit. Open emitters allow the designer to sense the current in each phase leg for accurate and low cost current sensing. A thermistor is included in the package for sensing the base-plate temperature. 5th Generation CSTBT chips yield low loss. The module is completely Pb-Free and hence RoHS compliant.

Features:

- ☐ Compact Package
- ☐ Only 5.7mm Thick
- ☐ One Package for Entire Family
- ☐ Thermistor
- ☐ Open Emitters

Applications:

- ☐ AC Motor Control
- ☐ Servo Motors
- ☐ Robotics
- ☐ HVAC Inverters

Ordering Information:

CP30TD1-12A is a 600 Volt, 30 Ampere DIP-CIB low profile, thermally efficient, transfer mold module.

*It is recommended to limit the average junction temperature below 125°C to ensure safe operation.
**T_C is measured just underneath the power chip.
***Pulse width and repetition rate should be such that the device junction temperature (T_j) does not exceed $T_{j(max.)}$ rating.
****I_E, V_{EC}, t_{rr}, and Q_{rr} represent characteristics of the anti-paralleled emitter-to-collector free-wheel diode (FWDi).
